A screenshot of the tcg mcube dashboard. On the left is a dark sidebar with a navigation menu: 'Explore', 'Widget', 'Analytics', 'Advanced Analytics', 'Dashboard', 'Report', 'Excel Upload', 'Help', 'Administration', and a 'Collapse' button. The main area has a dark header with the tcg mcube logo and a 'Welcome User' dropdown. The content area displays a 'Welcome to tcg mcube.' message and a note about customizing the landing page or setting a tcg mcube dashboard as the landing page from 'Advanced Settings'.

VERSION CHECK

1

The screenshot shows the tcg mcube application interface. On the left is a dark sidebar with various navigation options: Explore, Widget, Analytics, Advanced Analytics, Dashboard, Report, Excel Upload, Help (which is selected), and Administration. Below the sidebar is a 'Collapse' button. The main content area has a header 'About Us' and a sub-header 'tcg mcube'. A detailed description follows:

tcg mcube is an end-to-end analytics platform with the objective to perform 360-degree analytics. It covers the entire analytics spectrum, starting from data ingestion and integration from multiple data-sources, to storing them in a searchable big data repository, to building widgets and reports for descriptive analytics and to running statistical/mathematical models for predictive/prescriptive analytics and machine learning.

Our platform integrates the entire organization to attain management excellence by helping Business Owners, Managers, Data Scientists, and IT leaders with Prescriptive Analytics based on business events and real-time data for predicting the future, going beyond historical data analysis and current trends. tcg mcube (moniker from Monitoring, Measuring, and Managing) is our proprietary three-layered analytics platform that corresponds to:

1. Data integration from disparate sources
2. Information delivery, and
3. Algorithm-based analytics.

The core data model of **tcg mcube** leverages semantic data-modeling techniques to support different database objects and attributes that allows extensive customization.

SAN-SAVE_SEARCH-01

1

The screenshot shows the TCG mcube interface. On the left is a sidebar with icons for Explore, Widget, Analytics, Advanced Analytics, Dashboard, Report, Excel Upload, Help, and Administration. The main area has a header with 'Search...', a magnifying glass icon, and 'Welcome User'. A dropdown menu shows 'admin_20190607' under 'Selected Fields' and 'Available Fields'. The main content area displays the message 'No results found!' and provides examples for refining queries using Elasticsearch's Query String syntax.

No results found!

Unfortunately I could not find any results matching your search. I tried really hard. I looked all over the place and frankly, I just couldn't find anything good. Help me, help you. Here are some ideas:

Refine your query

The search bar at the top uses Elasticsearch's support for Lucene Query String syntax. Let's say we're searching web server logs that have been parsed into a few fields.

Examples:

Find requests that contain the number 200, in any field:
200

Or we can search in a specific field. Find 200 in the status field:
status:200

Find all status codes between 400-499:
status:[400 TO 499]

Find status codes 400-499 with the extension php:
status:[400 TO 499] AND extension:PHP

2

The screenshot shows the TCG mcube interface. The sidebar and header are identical to the first screenshot. The dropdown menu shows 'supstore' under 'Selected Fields' and 'Available Fields'. The main content area displays the message 'No results found!' and provides examples for refining queries using Elasticsearch's Query String syntax.
